# CPD Seminar on Electric Underfloor Heating and Ice and Snow Mitigation Systems

**Free CPD training at Strike Electrical Distributors  
Friday 14th June from 10.30am - book in store**

The Seminar is applicable for gaining CPD Points and covers the following:

- A thorough overview of electric underfloor heating systems, ice & snow melting systems, build up mitigation systems, roof & gutter heating, access ramp & driveway heating, frost protection, mirror demisters and other cable heating systems.
- With a general move towards electric heating of some form in the future, electric underfloor heating can offer a cost-effective solution while being aesthetically seamless (because you can't see it!) and frees up wall space thus giving more flexibility in design of living and working spaces.
- Outdoor heating solutions tend to be to solve a problem, from keeping disabled access ramps free from ice and snow, to making sure an underground or multi storey car parks can be accessed safely, or in the case of roof and gutter heating to stop build-up that can have H&S implications but could also cause damage to the fabric of the building.
- We have heated everything from railway platforms to the roof of the NEC.  
If there is a solution required, it can probably be found.
- As required by CPD Certification there is no bias in anything we present, all the information provided in the seminar is applicable to all the competitor brands in the market.
